## Fly Fishing

Idaho is well known for its premium fly fishing waters. The clear streams and high mountain lakes provide some of the best fly fishing anywhere. Skilled anglers, equipped with a 7' to 9' fly rod and the right fly pattern, can spend days exploring some of the most beautiful country in the world and catching fish, too.

You don't have to buy expensive equipment to give fly fishing a try. You may wish to start out by rigging a clear bubble set up on your spinning gear, and testing your luck with a fly. Simply add a clear bubble to the monofilament line, add about 3 feet of leader to the other end of the bubble, tie on the fly and you are set. Be aware this tackle set up is not allowed in fly fishing only areas. Local fishing shops can give you hints on what patterns are "hot."

There are a lot of great spots in Idaho to fly fish. Generally, any trophy trout waters should provide you with great opportunity. Here's a few special areas to try: the world famous Henrys Fork, Silver Creek, the Big Wood River, and farther north, Kelly Creek, the North Fork of the Coeur d'Alene and St. Joe rivers to name a few.

## Ice Fishing

Ice fishing reservoirs and lakes can turn those long winter days into great outdoor adventures. The most common species sought while ice fishing are perch and trout. The regulations for limits and size are the same year-round, but when ice fishing you may use as many as five lines at one time.

Ice is generally safe when three to four inches thick; however, if you are venturing out on snow machines or an ATV, you are advised to wait for eight to ten inches of clear solid ice. You may drill as many holes as you like, but spread them out and be sure that none are greater than 10 inches in diameter. Remember, ice conditions vary with weather, so be sure to take along your common sense.

### Basic ice fishing equipment:

Tackle such as an assortment of Swedish pimples, glow hooks, jigs or ice flies will get you started especially if used with baits such as maggots, perch eyes or cut bait.

To get started, set up your rods with the chosen tackle. Then begin looking for the fish. You may need to try fishing at different levels. Generally, perch like deep water, 10 to 40 feet, close to the bottom, while trout will often be found a bit further up off the bottom.

Jigging is an effective ice fishing technique. To jig, slowly bring the rig up about one foot, then allow it to settle back down, repeat. The movement of the bait attracts the fish's attention. Some anglers prefer to just set the lines and watch for the strike.
